

Universal Voice Remote

The only control solution where simple voice commands unify a home theatre system. Ambrid gives control to any user with no voice learning.

The Ambrid advanced design provides the only comprehensive voice control for all home theatre equipment –for all users. It delivers a unique, superior solution for home theatres and delivers maximum simplicity, flexibility, and customization. It is the most sophisticated control system in the world - a user experience like no other.

Voice is best. With combined hardware & software engineering advances, Ambrid SmartVoice® technology lets anyone just say "Watch DVD" or "Listen to Music". Ambrid automatically transitions each of the devices required. It delivers the long needed relief that button or LCD controls can't accomplish. Ambrid's control and processing technology, coupled with breakthrough components is the next generation of Home Theatre control.

Easy to use. Users learn no buttons, and can disregard which devices need to operate. With true one-command voice control anyone can just tell the Ambrid handheld what to do. "Watch CNN" - Ambrid processes the request, and commands the devices automatically. And Ambrid knows what each component is doing, so when a user switches activities all devices respond accurately.

Easy to set up. Ambrid setup and configuration is fast and easy – it will shorten the time for new installations. The Configurator software walks you through set-up by simply asking what home theater equipment is installed, verifying desired activities and

then adjusting all control and output settings for you. The software has been purposefully designed to allow the Professional Installer to complete an installation in a fraction of the time other controllers take.

Any users – no learning. SmartVoice® technology understands the voice of any user

right out of the box – there is no voice pattern learning. Even strong accents are understood. No one has to be a technophile to use it - everyone from Grandma to the baby sitter will command it with ease. Just pick up the handheld and tell it what you want.

Easy to maintain. Ambrid gives system access on site or via secure remote Internet access to monitor operation, or make any changes. You can deliver a higher level of customer service. Quickly make any adds or changes from any location.

Whole home & outdoors. The Ambrid works on RF transmission. It sends through walls and cabinets - throughout the house and outdoors. Users can command the system from anywhere – the patio, pool, or any room in the house.

Up to date. The Ambrid device database includes thousands of manufacturers and their devices; everything from HDTVs to DVRs, VCRs to TiVo to all the local cable TV stations. It's constantly

updated with new components and line-ups, so your remote will never be out-of-date. Connect your base station for Internet access, and updates are automatically available 24 hours a day.

Replaces all existing remotes. A single remote to command any number of components at the same time. Ambrid controls an almost unlimited number of devices: IR, RF, RS-232, USB. Easily add Ambrid to an existing Home Theatre installation in minutes.

Advanced and obvious technology. Ambrid allows your customers to enjoy their system their way. Imagine all components and content — DVD, Cable, CDs, MP3s, satellite radio —brought together in a single

system and accessible by anyone via simple voice controls. With Ambrid, it's all tied together in an astonishingly easy to use voice system. Unique and sophisticated, Ambrid makes the first item your customer uses – the controller – truly an exceptional experience.

Ambrid technology really does revolutionize the standards for custom installers. The system is particularly well suited for running high end, complex home theatre installations. Yet it delivers a complete, cost-effective solution for systems of almost any scope or cost.

System Highlights

Feature	Benefit
Advanced Natural Voice Commands	
Single activity commands	Users only need to say what they wish to do, such as “channel 10”, or “watch DVD”. There is no need to understand what sequence of buttons to push. No turning off one set of equipment and turning on another.
No voice learning needed	Out of the box, the system understands everyone. Users do not need to be present to complete an install. All your customers’ family members and even visitors can use the home theatre right from the start.
Integral Control of All Home Theatre Components	
Advanced processing eliminates command errors	Ambrid is virtually 100% accurate. When a user gives a command, the system will understand the desired action, and will transparently perform it
Long distances; Indoor and Outdoor with RF & IR.	Users can use the handheld remote controller from any room in the house, or outside at a good distance.
Simple handheld, plus a few key buttons	Users just speak at the handheld remote to prompt activity. A few key buttons can be used (if desired) to control such things as volume, channel surfing, etc.
Any components, any size system	Ambrid will support the largest, most complex Home Theatres with simple voice control. Users tell Ambrid what channel to turn on, which CD to play, DVD, iTunes, etc.
Speed installation, Setup, Modification	
Access and control Ambrid from any location	The ability to remotely monitor, change, and add to the system is the key to customer satisfaction and loyalty.
Configurator with easy Interface	The Ambrid Configurator is a step by step interface to define the components of the Home Theatre, How they are connected, and to add any voice commands the user wants that are not already part of the extensive command library. It is easy, and fast.
Expandability and high end home theatre support	Ambrid is the only voice system technology that can support high-end complex systems. Plus, expanding the system is as easy as adding equipment to the configurator.

Specifications

To deploy Ambrid you receive:

Base Station – a slim form factor system running Windows. Includes USB ports, Ethernet/network connector, monitor port, etc. Houses the RF receiver and has assignable ports for up to twelve IR emitter control lines.

Remote control handset - RF transmitting (2.4 GHz band, spread spectrum) voice remote (with batteries).

IR emitter LED lines. Connect them to each home theatre device.

Configurator software CD for your laptop/desktop. Used to configure Ambrid Base Stations and to provide access to the Ambrid system at your customer’s site. Free on-line system updates included.

IR code database supports the majority of home theatre devices (unique IR codes are easily self-learned by Ambrid).

Unlimited free technical support via phone & email.

Internet access for base station and installers’ configurator PC are recommended.

Ambrid home theatre - tell the difference.
